Projected Foreclosures by Congressional District

NOTES

^[0] Shares of projected foreclosures for congressional districts were estimated using the McDash mortgage database. Data aggregated based on latest available matching of zipcodes to Congressional district (109th Congress). Total of 22,530,041 first lien mortgages secured by single family house, condo, townhome, or multifamily home were analyzed for this purpose. All the mortgages are outstanding by the middle of 2008. For any of the mortgages, if it is in foreclosure process, or if it has at least three late payments for the past 12 months by the middle of 2008, the mortgage is projected to foreclose eventually. # of mortgages projected to foreclose was aggregated to Zip code level. Zip codes were then assigned to congressional districts. # of mortgages projected to foreclose was then aggregated from Zip code level to congressional district level weighted by portion of the Zip code in the congressional district. Finally, # of mortgages projected to foreclose for congressional districts are divided by the total of US projected foreclosures to get the share of projected foreclosures for congressional districts. Districts that are represented in the McDash data in significantly greater proportion than their share of the overall housing market may show an overly high foreclosure projection.

^[1] Shares of projected foreclosures for congressional districts multiply by MBA projections of foreclosures in 2009 (2,432,900).

^[2] Shares of projected foreclosures for congressional districts multiply by Credit Suisse projections of foreclosures over next 5 years (8,100,000).

^[3] Shares of projected foreclosures for congressional districts multiply by Moody's Economy.com projected reduction on foreclosures due to court-supervised modifications (800,000).
