GEORGIA

GA payday lenders disproportionately HARM:
LOW-INCOME FAMILIES • PEOPLE OF COLOR

GEORGIA has long been a national leader in the fight against predatory lending, imposing strict usury limits on small loans. In 2004, Georgia legislators closed loopholes used by payday lenders to charge triple-digit interest rates; they reaffirmed their commitment to keeping payday lending out by increasing fines and criminal penalties for making small loans at illegal interest rates. These laws save Georgians over $284 million annually. Georgians are also concerned about other high-cost loans like car-title lending, in which lenders charge annual interest rates of up to 300%. A 2019 poll found that 83% of registered Georgia voters felt there should be a cap on car-title lending rates.

68% of Georgia voters strongly support the 36% rate cap on payday lenders.

POLLING QUESTION: “As you may know, the average annual interest rate on payday loans is 391%. Would you support or oppose a proposal to put a cap on the interest rates that payday lenders may charge at 36% annual interest?”

50% strongly support the 36% rate cap.

18% somewhat support.

4% somewhat oppose.

8% strongly oppose.

20% don’t know/no opinion.

61% of the voters who oppose a 36% rate cap do so because they believe the rate should be lower than 36% annual interest.

68% of Georgia voters prefer a rate cap that includes fees on loans for all consumers.

91% of Georgia voters overwhelmingly prefer an all-in rate cap.

POLLING QUESTION: “As you may know, loans issued to members of the military are capped by federal law at 36% annual interest including fees. Some have suggested that another way to cap loans for all consumers would be to cap them at 36% annual interest plus additional fees in addition to the annual interest. Which of the following options would you prefer for all consumers?”

91% prefer 36% annual interest rate including fees.

9% prefer 36% annual interest rate plus additional fees.
GEORGIA VOTERS OVERWHELMingly SUPPORT 36% RATE CAP

Georgians continue to overwhelmingly support a rate cap on payday and other high-cost loans; they also support a 36% rate cap on larger consumer installment loans and want to ensure the strong state laws preventing abusive practices by lenders cannot be evaded.

POLLING QUESTION: “As you may know, the annual interest rate with fees for consumer installment loans can range from below 10% to well over 100%. Would you support or oppose a proposal to put a cap on the interest rates of these loans at no more than 36% annual interest?”

68% of Georgia voters support a 36% interest rate cap on installment loans

41% strongly support the 36% rate cap

POLLING QUESTION: “As you may know, in some states, state law already prohibits payday lenders from charging more than 36% annual interest. Banks, however, are not subject to state interest rate limits. In states with interest rate limits, payday or other high-cost lenders sometimes avoid state rate limits by arranging high-cost loans to consumers through banks. These loans often have 100% annual interest rates or higher even in states with lower rate limits. How concerned are you about the ability of high-cost lenders to arrange loans through banks at rates higher than state laws allow?”

66% of Georgia voters are concerned about rate cap evasion

35% of Georgia voters are very concerned about high-cost lenders arranging loans through banks at rates higher than state laws allow

METHODOLOGY: This poll was conducted between January 9–15, 2020 among a national sample of 9,962 registered voters. The interviews were conducted online, and the data were weighted to approximate a target sample of registered voters based on age, educational attainment, gender, race, and region. Results from the full survey have a margin of error of +/- 1%. State results use a statistical technique called multilevel regression with post-stratification (MRP) to estimate state-level public opinion from the national survey data for a specific month. Responses to each survey question are modeled via multilevel regression as a function of both individual level and state-level variables. Morning Consult models use age, gender, education, and race as individual-level predictor variables. For state-level variables, Morning Consult chose variables that may influence state-level vote choice such as the percent change in state gross domestic product (GDP), state unemployment rates, state median household income, and state-level outcomes from the 2016 presidential election. Morning Consult obtained population parameters for registered voters from the November 2016 Current Population Survey. Morning Consult applied post-stratification weights at the state level based on gender, age, educational attainment, and race using the American Community Survey (ACS). Figures may not add to 100% due to rounding.
