Many for-profit colleges—which serve a disproportionate number of African American and Latino students—have failed to deliver on the promise of improving students’ economic lives through higher education.

A post-secondary education can serve as an asset that enables graduates to secure good jobs with steady incomes, enabling further accumulation of other assets in the future such as a home, business, and secure retirement. Taking on debt for an education can be a helpful investment. Unfortunately, for-profits often fail to provide a quality education for students, leaving many with a dangerous level of debt and little improvement in earning potential.

**Why are for-profit colleges a concern for African American and Latino Students?**

- African American and Latino students enroll more frequently in for-profit colleges than white students.
- For-profit colleges are more expensive to attend than other schools. As a result, African American and Latino students that attend for-profits become more heavily indebted than their peers at other schools.
- The return on investment for attendees of for-profit colleges is troubling. A greater share of borrowers who attended for-profit schools default within their first few years of repayment than their peers from other types of schools.
- Serious concerns about for-profits such as high-pressure sales tactics, predatory lending, and misleading job placement rates have been raised by Congress and state and federal regulators.¹

**How can for-profit colleges be improved for African American and Latino students?**

- The Department of Education’s recently proposed Gainful Employment rule directed at career education programs aims to curb some of the worst abuses in this sector that lead to unmanageable debt.²
- The rule needs to be strengthened to fully protect students from abuses in the for-profit college sector.

---

• The Department should lower acceptable debt-to-income ratios, close loopholes that allow schools to manipulate default rates, provide relief to students enrolled in failing programs, and more rigorously screen programs in advance to ensure they prepare students for employment.\(^3\)

**African Americans and Latinos enroll more frequently in for-profit colleges for their post-secondary education than white students.**

• Over a quarter (28%) of African Americans and 15% of Latinos attending four-year institutions enroll in a for-profit college, compared to 10% of whites selecting among four-year programs. This disparity is present for two-year and less-than-two-year programs as well.

**African Americans and Latinos attending for-profit colleges are more likely to borrow than those who enroll in other institutions**

• African Americans and Latinos attending for-profit colleges are more likely to borrow than those who enroll in other institutions, whether they attend a two- or four-year program.
• One reason for this is that for-profit colleges often have high tuition and fees—for profit colleges cost more than twice as much for a four-year program and four times as much for a two-year program than public institutions.

**For-profit colleges linked to greater default rates**

- Ultimately, borrowers that attend for-profit colleges are much more likely to default on their student loans shortly after entering repayment, suggesting that for-profit colleges do not adequately prepare attendees for jobs with adequate salaries.
• In fact, many attendees of for-profit colleges do not even graduate—leaving the programs with debt and no credential.4
• A two-year investigation of for-profit colleges by the Senate Health, Education, Labor, and Pensions Committee found that a majority of students were unable to complete their programs and that the schools often misled students about their ability to secure a job in their field after graduation or to transfer to another institution to continue their studies.5

4 An analysis done by The Education Trust finds completion rates of 22% within 6 years for students attending 4 year for-profit institutions compared to completion rates of over 50% at their private and public sector counterparts. See Mamie Lynch, Jennifer Engle, and Jose Cruz, *Subprime Opportunity: The Unfulfilled Promise of For-Profit Colleges and Universities*, The Education Trust (November 2010).
